No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
and/or diagnosis of the full-length cDNAs -
```

ID 11697; 2537pp + B ROM; English

The present invention describes primer sets for synthesising 5602 cc full-length cDNAs defined in the specification. Where a primer set cc comprises: (a) an oligo-dT primer and an oligonucleotide comprises one of the 5602 nucleotide sequences defined in the specification, where the cc complementary strand of a polynucleotide which comprises one of cc oligonucleotide comprises at least 15 nucleotides; or (b) a combination cof an oligonucleotide comprising a sequence complementary to the cc complementary strand of a polynucleotide which comprises a 5'-end cc complementary to a c present invention.

```
comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the Rhesus box(es), preferably the hybrid Rhesus box, the upstream Rhesus box and/or the downstream Rhesus box. The RHD and RHCE genes are located at chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the che state of the common RHD negative haplotypes. The sequence has been used to design primers which are useful for: (1) the specific detection of the common RHD positive haplotypes in D-negative patient individuals; (2) blood group typing; (3) determining whether a patient can be transfused with RHD negative blood and whether blood is suitable for transfusion to patients who should not be exposed to antigen C; (4) assessing the risk of a RhD negative mother of conceiving or carrying an RhD positive foetus. Anti-D antibodies are useful for treating pregnant women who are Rhesus D negative, where the foetus is not homozygous for the RHD gene to treat or prevent haemolytic disease of the newborn.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  xod

The sequence represents the coding sequence of Rhesus gene locus: downstream Rhesus box of D positives. The Rhesus genes locus comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the Rhesus box(es), preferably the hybrid Rhesus box, the upstream Rhesus box and/or the downstream Rhesus box. The RHD and RHCE genes are located at chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the RHD deletion in the common RHD negative haplotypes. The sequence has been used to design primers which are useful for: (1) the specific detection of the common RHD positive haplotypes in D-negative individuals; (2) blood group typing; (3) determining whether a patient can be transfused with RhD negative blood and whether blood is suitable for transfusion to patients who should not be exposed to antigen C; (4) assessing the risk of a RhD negative mother of conceiving or carrying and RhD positive foetus. Anti-D antibodies are useful for treating pregnant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                       CC The sequence represents the coding sequence of Rhesus gene locus:
CC hybrid Rhesus box of RHD negatives. The Rhesus genes locus
CC comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the
CC comprises the RHD, SMP1 and RHCE (all undefined) genes are located at
CC chromosome 1 p34.1-p36. Rhesus box. The RHD and RHCE genes are located at
CC chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the
CC RHD deletion in the common RHD negative haplotypes. The sequence has
CC been used to design primers which are useful for: (1) the specific
CC detection of the common RHD positive haplotypes in D-negative
CC individuals; (2) blood group typing; (3) determining whether a patient
CC can be transfused with RhD negative blood and whether blood is suitable
CC for transfusion to patients who should not be exposed to antigen C; (4)
CC assessing the risk of a RhD negative mother of conceiving or carrying an
CC compositive foetus. Anti-D antibodies are useful for treating pregnant
CC women who are Rhesus D negative, where the foetus is not homozygous for
CC the RHD gene to treat or prevent haemolytic disease of the newborn.
                                                                                                                                                                                                                                                                                                                                         RHD

sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein-encoding cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       wsnttyathmgngargcngarcayaarwsnwsngaraayytncayccngayaaygtnath

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides the protein and coding sequences of number of human reproductive system related antigens. These can be in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encodiprotein of the invention.

Fragments of a SPINK5 clone, sequencing primers and PCR primers for SPINK5. SPINK5 encodes lympho-epithelial Kazal-type related inhibitor (LEKTI), a serine protease inhibitor. Susceptibility or predisposition to an atopic disease in a human subject can be detected by screening the genome for one or more polymorphic variants of SPINK5 gene and/or expression of a variant LEKTI protein in a tissue. Carrier status of a subject or development of Netherton's syndrome is diagnosed by screening for the presence of loss-of-function mutations in the SPINK5 gene. An expression vector comprising a nucleic acid encoding a serine protease inhibitor or its functional fragment can be used in screening for compounds with potential pharmacological activity by determining the serine protease activity of a protein previously identified as a ligand of the LEKTI protein. The atopic diseases include Netherton's Syndrome, asthma erzema and haverer
                                                                                                                                                                                                                                                                                                                                                        Netherton's s in SPINK5, a inhibitor -
                                                                                                                                                                                                                                                                                  Sequences AAS44359-AAS44514 represent the SPINK5 gene,
                                                                                                                                                                                                                                                                                                                                                                       Determining susceptibility to atopic disease or carrier status of Netherton's syndrome in humans by identifying variants of or mutations in SPINK5, a gene encoding lympho-epithelial Kazal-type related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       02-MAR-2000;

Sequences AAS44359-AAS44514 represent the SPINK5 gene, contigs and fragments of a SPINK5 clone, sequencing primers and PCR primers for SPINK5. SPINK5 encodes lympho-epithelial Kazal-type related inhibitor (LEKTI), a serine protease inhibitor. Susceptibility or predisposition to an atopic disease in a human subject can be detected by screening the genome for one or more polymorphic variants of SPINK5 gene and/or expression of a variant LEKTI protein in a tissue. Carrier status of a subject or development of Netherton's syndrome is diagnosed by screening for the presence of loss-of-function mutations in the SPINK5 gene. An expression vector comprising a nucleic acid encoding a serine protease inhibitor or its functional fragment can be used in screening for compounds with potential pharmacological activity by determining the serine protease activity of a protein previously identified as a ligand of the LEKTI protein. The atopic diseases include Netherton's Syndrome,

These can be in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence enceprotein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

CC full-length cDNAs defined in the specification. Where a primer set to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the complementary strand of a polynucleotides; or (b) a combination (c) of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination (c) of an oligonucleotide comprising a sequence complementary to the cc complementary strand of a polynucleotide which comprises a 5'-end cc complementary to a combination of the 5'-end sequence and an oligonucleotide comprising a sequence, where the coligonucleotide which comprises a 3'-end sequence, where the coligonucleotide comprises a 3'-end sequence, where the coligonucleotide comprises a 1'-end sequence, where the combination of the specification. The primer sets can be used in antisense therapy and cl in gene therapy. The primers are useful for synthesising polynucleotides, can gene therapy full-length cDNAs. The primers are also useful for the combination of the full-length cDNAs. The primers are also useful for the constant of the sasily without any specialised methods. AAH03166 to AAH13628 and can be assily without any specialised methods. AAH03166 to AAH13632 crepresent oligonucleotides, all of which are used in the exemplification of the present inventions.
                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                        438966
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes an isolated peptide (I) consisting of an amino acid sequence selected from: (a) the amino acid sequence of a variant of the oestrogen receptor alpha (ESR-alpha) protein in AAG68251; or (b) a fragment comprising at least 10 contiguous amino acids of the protein in AAG68251. (I) has cytostatic, osteopathic, cardiant and vasotropic activities, and can be used in gene therapy and vaccine production. (I) is useful for identifying an agent that binds to (I), by contacting (I) with an agent and assaying the contacted mixture to determine whether a complex is formed with the agent bound to the peptide. A polynucleotide (II), encoding (I), is useful in the development of diagnostics and therapies for diseases and disorders mediated/modulated by an oestrogen receptor (ER). (II) is also useful in the threapies of the agent bound to the peptide. A polynucleotide (II), encoding (I), is useful in the development of diagnostics and contacted on a cardiovascular man repeal the agent bound acrdiovascular man agent therapies of the agent bounded of the agent bounded on t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel variant of estrogen receptor alpha polypeptide useful for determining the biological activity of a protein for high throughput screening and for raising antibodies that elicit an immune response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                22-FEB-2000; 2000US-183756P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ₽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (II) (II) is useful for generating antibodies against it detecting or constituting a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. As564197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fifth wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

(I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy technique to restore normal activity of (II) or to treat disease states involving
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1;

The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune systems. AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammatic allergies, neurological disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, schizophrenia, asthma, and allergies, neurological disorders, schizophrenia, asthma, and allergies, neurological disorders, schizophrenia, asthma, and allergies, cognitive disorders, schizophrenia, asthma, and allergies athores.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAD05121-AAD05203 represent cDNAs corresponding to 24 human secreted protein genes, and AAE01232-AAE01311 represent the proteins they encode. AAE01312-AAE01340 represent human secreted protein variants or fragments. The secreted proteins and their genes are useful for preventing treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 24 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (HUMA-) HUMAN GENOME

                                                                                                                                                                                           망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated polynucleotide (I) and CD polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. (The polypeptide and polypucleotide sequences have applications in CC diagnostics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC and to acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed content of the invention of antifornity and produced format directly from WIPO as fractions of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score
